

Intro to Electronics

1. What's a microcontroller?
2. Projects we've done at UBC
3. Hands-on intro to electronics kits, boards.
4. Tours of our lab (~5pm?)

Microcontrollers for Projects

What is a Microcontroller?

- **General-purpose** programmable chips used to have built-in functions:
 - Reading digital and analog signals
 - Have on-board memory
 - Connect to other devices easily

In the old days (~7 years ago)

- Hardware programmer required
- Software was hard to get started.

Nowadays

- Program it through a computer, but it runs on its own
- Now, programming and USB on-board. Cheap!
- Newer software “hides” much of the software inside.

e.g. \$30 Arduino board

www.arduino.cc

\$30 for the board.

Arduino is an open-source electronics prototyping platform based on flexible, easy-to-use hardware and software. It's intended for artists, designers, hobbyists, and anyone interested in creating interactive objects or environments.

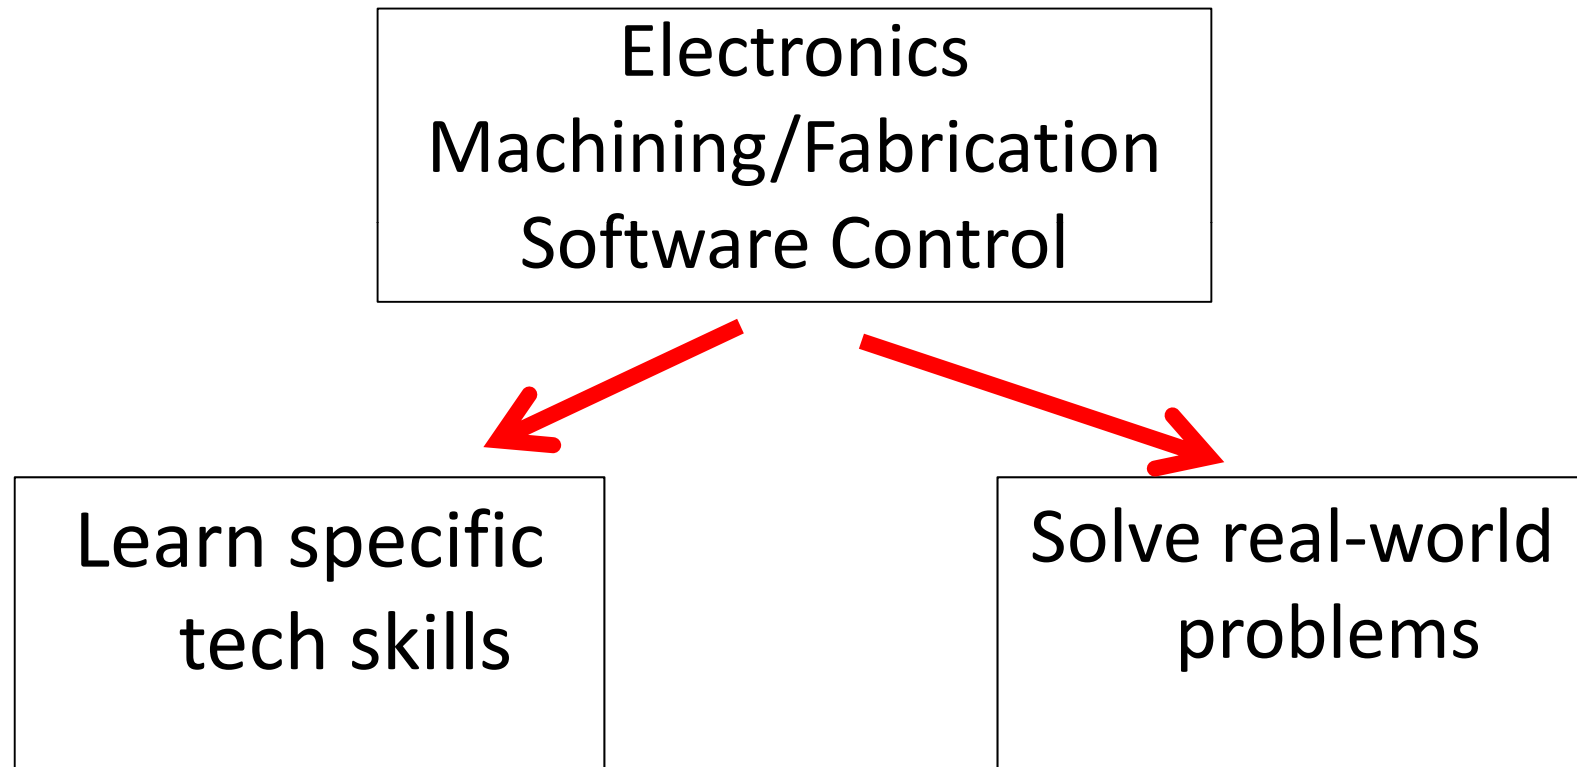

Arduino can sense the environment by receiving input from a variety of sensors and can affect its surroundings by controlling lights, motors, and other actuators. The microcontroller on the board is programmed using the Arduino programming language (based on Wiring) and the Arduino development environment (based on Processing). Arduino projects can be stand-alone or they can communicate with software on running on a computer (e.g. Flash, Processing, MaxMSP).

2. Projects we do here at UBC

Physical Prototyping for UBC Engineers

UBC Phys 253 – course for 2nd year students

2008 Operation-Bots

10th annual
ubc engineering physics
robot competition

RoboRacers

2010 august 5

Sponsored by:

Phys253 Summer 2010 : **Robo-Racers**

Phys253 Summer 2011 :

Climber-Bots

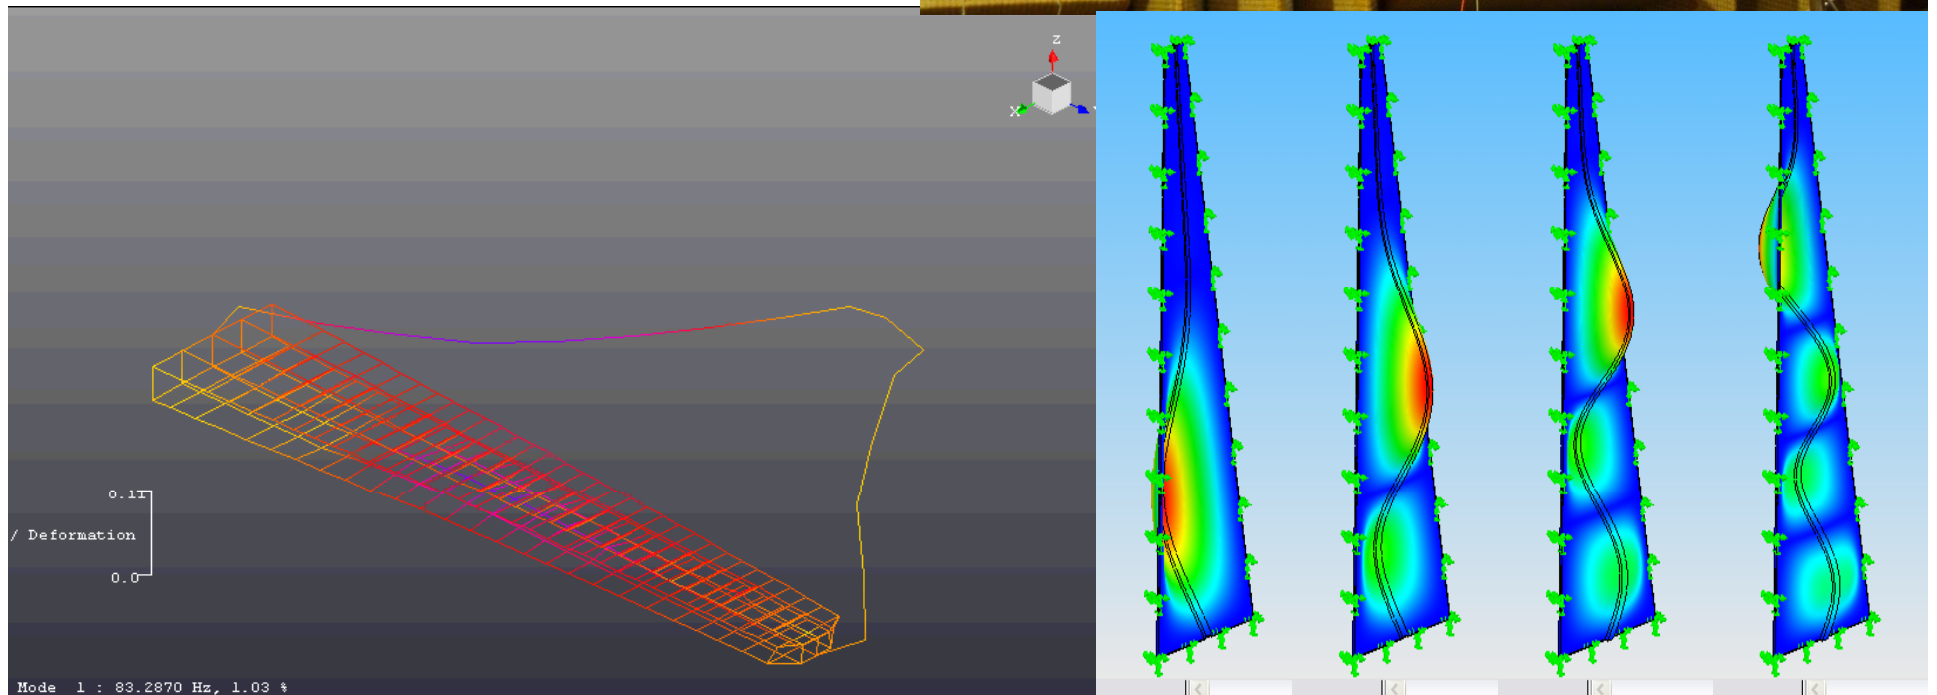

8 foot tall
climbing
wall

Projects done by
Engphys students
for course credit

Acoustics Project

- Modal analysis of structures (esp. musical instruments)

CamNet

Total cost: ~\$250

Laser pointer holder
(for alignment during
setup)

Waterproof
enclosure

Camera

Li-polymer
battery

Solar panel
connector

Arduino
microcontroller

Wireless communication

\$26 Xbee module from Robotshop.ca

Test Results

Line of Sight Range Test: ~1km

Urban Range Test: ~100m

Image Quality Test

A letter sized "9" can be easily recognized over 92 ft away.

>> A camera node can acquire an image with enough clarity to read a standard gas station sign from over a block away

Platelets save lives. **We save platelets.**

ThromboLUX™ is a quick and simple diagnostic test for platelet quality and function that will make it easy to screen platelets prior to transfusion.

Traditional methods of platelet quality testing are unreliable, time consuming, expensive and not used routinely. LightIntegra intends to make platelet quality testing a regular practice in blood banks around the world by making it accessible, affordable, reliable and fast.

Vancouver Junkyard Wars! 2005 - Walking vehicle

Competition Day! Built in 1 weekend.
